

# URBEX MIPS

Urban | E-bike | Commuting | S-Pedelec

The modern and minimal design is inspired by a new generation of cyclists who are changing urban mobility. Made safer by the NTA certification, the Urbex is fully equipped with features that ensure comfort, visibility and ease of use.

What is NTA 8776? The NTA certification is the world's first safety standard developed specifically for Ebike riders. Being NTA-certified, the MET Urbex Mips is able to dissipate significantly more impact energy compared to a standard helmet, an NTA EPS shell has also 10% more impact-tested coverage around the two most sensitive brain areas: the back and the temples. In a few words; the Urbex Mips is one of the safest helmets out there.

Featuring the MIPS-C2® brain protection system, the MET Urbex Mips is able to slide relative to the head in case of a crash, redirecting damaging rotational motion. MIPS is a rotational management system—engineered to add protection to the standard construction of helmets in case of certain impacts. The MIPS Brain Protection System (BPS) is attached inside the helmet between the comfort padding and the EPS.

The MET Magnetic USB Led Light is attached onto the upper back part of the helmet to ensure the highest level of visibility in all conditions. A magnetic system gives a simple, secure attachment to the helmet shell and makes it easier to remove the light and recharge the battery by a USB-C port. The light is water resistant and the 25 led spotlights have four operation modes; steady red light, blinking red light, strobe red lights and an automatic night-safe mode which is marked by a steady blue led. Battery life is up to 8 hours and a full charge takes one hour.

The Urbex Mips is exceptionally comfortable and secure on the head thanks to a refined internal shape and the new MET Safe-T Heta fit system offers an all-round adjustment and an individual fit. Straps are well positioned and customisable due to the adjustable divider engineered ingeniously for ease of use and reliability. The magnetic Fidlock® strap fastening system makes securing the helmet simple, while the padded chin strap ensures a soft-touch on the skin.

## FEATURES

- In-mould polycarbonate shell with EPS liner
- Fully polycarbonate wrapped EPS liner to enhance durability
- NTA 8776 certification specifically for eBike use
- Extended head coverage for deeper head protection
- MIPS-C2® rotational management system to increase protection against certain impacts
- MET Magnetic USB LED Light to ensure you are always visible on the road
- MET Safe-T Heta Fit System
- 360° head belt to avoid pressure points on the head, Vertical adjustment to maximise adjustability
- Exceptionally comfortable and secure on the head thanks to refined internal shape
- Anti-insect net embedded into the front vents
- Hand washable comfort pads
- 13 Vents, Internal engineered air channeling to improve ventilation and comfort
- Fidlock® Magnetic Buckle makes it easy to secure the helmet
- Straps with adjustable dividers leave you with an individual fit
- Reflective rear decal enhance visibility
